超纤是指单根纤维的纤度小于0.1旦，通过共混熔融纺丝制备的海岛型超纤的纤度可达0.001旦。

“超纤皮”采用了与天然皮革中束状胶原纤维结构性能相似的尼龙束状超细纤维，最大限度的还原了天然皮革优良的触感和舒适度，在回弹性、强度、防水、防霉变、耐寒、耐磨等性能上接近或超越天然皮革。

We encourage innovation, so we bring change to life

Over the years, we have been committing ourselves to exploring new areas of product applications through constant technical innovation, getting close to people's real life, breaking the traditional consumption concept and realizing substantive improvements in the quality of human life.

Microfibre or superfine fibre refers to single fibre with diameter less than 0.1 denier; however, the diameter of Sea-island staple fibre, after being processed by blending – melting – spinning, can reach as thin as 0.001 denier. Huafo Microfibre bears strong resemblance to bundles of collagen fibre of nature leather in its structure and property, and perfectly replicates the natural and comfortable feeling of real leather to the bare maximum. The advantages over leather include elasticity, strength, waterproof, mildew prevention, wear resistance, etc.
